TECHNICAL SKILLS

Frontend

Next.js · React · TypeScript · Tailwind CSS · Flutter

Backend

Node.js · FastAPI · Fastify · Python · PHP

Database

PostgreSQL · Redis · Oracle · MySQL

AI / LLM

LangGraph · GPT-4o · Gemini API · n8n

DevOps

Docker · PM2 · Apache · Nginx · Linux VPS

Integrations

WhatsApp Business API · GrabExpress · Kafka · Elasticsearch · Supabase

EDUCATION

D3 – Management Informatika

Univ. Bina Sarana Informatika
Graduated 2014

SMA

SMAN X Harapan Indah Bekasi
2006 – 2009

LANGUAGES

Bahasa Indonesia — Native
English — Professional

PROFILE

Versatile Full-Stack Engineer with 8+ years of experience building scalable web, mobile, and AI-integrated systems. Specialised in Next.js/React frontends and Node.js/FastAPI backends, with solid expertise in PostgreSQL, Redis, Supabase, and third-party API integrations. Experienced in leading end-to-end feature development, owning full tech scope independently, and delivering measurable business impact. Strong focus on clean architecture, UI/UX quality, and Core Web Vitals performance.

WORK EXPERIENCE

Assistant Manager – Tech Improvement

PT. Lotte Shopping Indonesia · Online Marketing Division | Feb 2022 – Present
order.lottemart.co.id

- › Promoted from IT Division to own end-to-end tech for the company's B2B/B2C e-commerce platform as sole full-stack engineer — covering UI, backend API, payment/webhook integration, security & auth, and DevOps.
- › Onboarded 20–50 stores onto the online platform, driving significant growth in online order volume across Lotte Mart & Lotte Grosir branches.
- › Architected the full payment & delivery pipeline: Espay/DOKU payment gateways, webhook handlers for payment confirmation & delivery status, and real-time order tracking via GrabExpress API.
- › Spearheaded migration from Flutter Web to Next.js (App Router) with measurable Core Web Vitals and SEO improvements; integrated WhatsApp Business API notifications and Elasticsearch-powered product search.
- › Developed an AI-assisted CS system (LOVA) using LangGraph, GPT-4o-mini, FastAPI, and WebSocket — reducing token usage from ~30K to ~5K per chat session (83% reduction) through architecture optimisation.
- › Built an in-store self-order Kiosk for Lotte F&B brands (Koffea, Cheese & Dough, Yorihada).

IT Programmer – Senior Staff

PT. Lotte Shopping Indonesia · IT Division | Oct 2018 – Feb 2022

- › Shipped the Lotte Mart Point app (Flutter/Kotlin, Android & iOS) for point redemption, e-vouchers, and promotions — reaching 100K+ registered users on Google Play & App Store.
- › Built internal tools: Citizen (IT helpdesk & user management), PrintPDA (barcode-based stock & shortage management), and Tablespace Monitoring with real-time push alerts via OneSignal.
- › Designed and optimised Oracle DB schemas, PL/SQL stored procedures, and queries for high-volume retail operations across multiple store branches.

Oracle Developer

Indocyber Global Teknologi · PT. Mandala Finance Project | Jul 2016 – Sep 2018

- › Developed PL/SQL stored procedures and triggers for core banking and finance modules.
- › Built Oracle Forms interfaces and BIRT-based management reports; performed tablespace tuning and query optimisation.

Database Administrator

PT Bank BTPN | Jan 2015 – Dec 2015

- › Managed Oracle database infrastructure — data analysis, portal maintenance, and database structure design to ensure system reliability.

FREELANCE & SIDE PROJECTS

RML Store (raiwa.id) — Digital Goods Platform

Solo Developer · Owner | 2024 – Present

A B2C SaaS platform for digital goods top-up (games, e-wallets, vouchers) targeting the Indonesian market. Built and operated end-to-end as sole developer.

- › Architected a 3-service system: rml-web (Next.js frontend), rml-core (Fastify v5 REST API + worker), and rml-admin (Next.js admin dashboard) — all deployed on a self-managed Contabo VPS with Nginx reverse proxy, PM2, SSL/Certbot.
- › Integrated Lapakgaming supplier API for automated product catalog ingestion with

4-step import modal, Auto Best Supplier toggling, and per-variant pricing management.

- › Implemented full auth flow with Google OAuth via Supabase, plus internal admin auth with service-role server actions.
- › Built catalog management with drag-and-drop how-to-buy steps, thumbnail upload (Supabase Storage), and multi-supplier variant management.
- › Designed PostgreSQL schema (v1.6) with generic digital goods naming (catalog_items, item_variants, item_variant_suppliers) and cashback voucher system (pending → committed → voided lifecycle).
- › Configured Nginx with security headers, rate limiting, and forced IPv4 DNS resolution to bypass Cloudflare blocking of upstream supplier APIs from VPS.

Stack: [Next.js](#) · [Fastify v5](#) · [PostgreSQL](#) · [Redis](#) · [Supabase](#) · [Nginx](#) · [PM2](#) · [Contabo VPS](#)

Naomi — Cardiac Patient Monitoring App

Freelance · Specialist Cardiologist Project | 2024

- › Built a remote patient monitoring system: Flutter mobile app for patients and a Node.js/MySQL web dashboard for the cardiologist — featuring vitals logging, appointment tracking, and doctor-patient communication.

Jukir — Cashless Parking App

Freelance · Dishub Pekanbaru, Riau (Pemda) | 2021

- › Developed a cashless parking mobile app (Flutter/PHP CodeIgniter/MySQL) for the Pekanbaru City Transportation Agency, supporting digital payments, e-tickets, and real-time collection reporting — targeting Rp 20M/day in parking revenue.

 **Media coverage:** suarapekanbaru.com — [Dishub Pekanbaru Targetkan Pihak Ketiga Pengelola Parkir Tepi Jalan](#)

Fristrim — Film Streaming App (discontinued)

Personal Project | ~2019

- › Built a consumer-facing Android film streaming app (Java Native) with PHP/CodeIgniter backend on CentOS 7; published on Google Play Store.
